Application checklist

We are interested in finding out more about you! This is intended as a conversation starter. Just check all that apply.

☐ You have enough experience with Drupal 7 to be able to complete a site as the only person on the project developing/site building and theming.

☐ You are fluent in HTML, CSS, and JS.

☐ You are fluent enough in PHP to write basic Drupal modules and work with ours.

☐ You are fluent enough on the command line to use drush, manage databases, use ruby gems, use git, and manage remote servers.

☐ You are able to implement designs accurately.

☐ You have experience working on agile/scrum projects.

☐ You have experience with any of the following development practices: development/deployment process, translation-friendly, using contexts + views + features in Drupal, responsive design + mobile first + grids, compass + susy

☐ You have experience with node.js, jquery, ruby, or meteor.

☐ You have experience with system/server administration, native mobile development, mapping, continuous integration, or shell scripting.

☐ You have experience with test-driven/behavior-driven development (especially Behat and Drupal).

☐ You have experience with pair programming.

☐ You have experience contributing to open source communities.

☐ You are self-aware and can receive constructive feedback and incorporate it into your practice.

☐ You are clear and articulate in writing and conversation.

☐ You have experience managing technology development projects and know how to respectfully appreciate your project managers/product owners/scrum masters.

☐ You have experience designing technology development projects and know how to respectfully appreciate your designers.

☐ You enjoy training users and writing documentation.

☐ You are fluent in English.

☐ You are also trained in another profession, such as practicing law, DJing, accounting, or design.
